Artificial Intelligence undergraduate student at BINUS University with experience in AI competitions, academic projects, and non-academic leadership roles. I have worked on projects across healthcare AI, legal AI, computer vision, NLP retrieval systems, smart city solutions, and MLOps deployment, often taking Project Manager roles while adapting to real constraints such as poor data quality, limited resources, and stakeholder needs. Through these experiences, I also built a close mentorship with a lecturer mentor, which strengthened my growth, collaboration, and professional direction.

Education

Undergraduate Student

BINUS University

GPA 3.76

Experiences

Project Manager — Global AI in Healthcare Hackathon (2026)

Represented BINUS University Kemanggisian in an international hackathon by working on a skin cancer classification and segmentation solution under limited data quality.

Project Manager — SRE ITB Hackathon (2026)

Led an IoT-based waste management using density comparison and won Best Theme Ideas.

Project Manager — AI Legal Assistant for BPOM Regulations (2026)

Led the development of an AI legal assistant for BPOM regulation retrieval, violation checking, and customer service report support.

Project Manager — Pre-Agentic NLP Retrieval System (2026)

Built a retrieval-based NLP system to reduce hallucination and provide more grounded responses without relying fully on fine-tuning.

Member — Student LED (2026)

Helped teach Data Structures and Python basics to first-year students while preparing them to teach high school students.

Project Manager — VISORA (2025)

Built my first AI system for visually impaired users using object detection and voice-based interaction.
