

Letter of Recommendation

To: Apple Developer Academy Selection Committee

I am pleased to write this letter of recommendation for **Owen Putra Halim** in support of his application to the **Apple Developer Academy**.

I am **Stefanus Benhard**, a lecturer in Artificial Intelligence at BINUS University. I have been entrusted to teach courses such as Applied Natural Language Processing and Applied Computer Vision. In addition to teaching, I often guide and mentor students who participate in academic competitions and hackathons. Owen is one of the students who has shown strong initiative and active involvement, including his participation in an international hackathon competition in **Central Asian University in Tashkent, Uzbekistan**.

Throughout my experience with Owen, I have seen him as a student who is highly motivated, adaptable, and eager to grow. Even when facing new subjects and technical challenges, he is able to adjust quickly and continue improving. His interest in Artificial Intelligence, especially in areas such as Computer Vision and Natural Language Processing, has developed significantly through both coursework and competition experience.

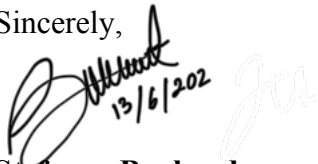

One particular aspect that stands out about Owen is his ability to learn through hands-on practice. During competition preparation and hackathon environments, he demonstrated strong problem-solving skills, persistence, and the ability to work under time pressure. I also observed growth in his leadership, adaptability, and technical confidence. The competition experience helped him improve not only in Computer Vision and NLP, but also in his attitude toward challenges. He showed a strong willingness to keep trying, learn from difficulties, and contribute actively to the team.

Because of this, I believe Owen would benefit greatly from an internship or practical learning environment. He learns fastest when given the opportunity to build, experiment, and solve real problems. After hearing about Owen's interest in joining the **Apple Developer Academy**, I believe this program would be a strong fit for his learning style, growth mindset, and passion for technology.

I strongly recommend **Owen Putra Halim** for this opportunity. I believe he has the curiosity, resilience, adaptability, and technical potential to contribute meaningfully to the program while continuing to grow as a future developer and innovator.

Please feel free to contact me should you require any further information.

Sincerely,

Stefanus Benhard

Lecturer of Artificial Intelligence Division
School of Computer Science, BINUS University
